- 5 standard fonts
- Variable character height, from 0.040" to 1.0"
- Automatic serialization and date coding
- Import AutoCAD images
- Controller options including mini portable controller with LCD display keyboard terminal
- 30-month standard warranty
- Technical support 24 hours 7 days a week

The *Stinger* is the most portable STYLINER Stylus Marker. Its light weight and ergonomic design make it particularly useful for marking large parts that are too heavy to move to a stationary marking machine. Durable construction and reliable components are backed by a 30-month warranty as well as Schmidt's factory- direct service and nationwide engineering, sales and technical support.

Like all Schmidt STYLINER Stylus Markers, the Stinger is a complete marking system. Choose from a variety of controller options to best suit your application; two operating software interfaces are also available. Schmidt can further enhance your marking process with custom end effectors and portable carts, and mark data entry via keyboard, 4 x 20 LCD display with membrane keypad, bar code scan, or RS232 serial port.
